1 Assumptions

These are the following assumptions that we took into consideration:

- We allow that a person can be an actor or an director, which means the actor can be a director and vice versa, e.g: as we can see in some productions in Hollywood.
- We can also assume that the actor's rating can be graded from a sort of feedback given in the episodes (although not specified). Also, it can be depending on the budget, like the producers can't afford to hire a good actor, which means an actor with higher ratings.
- Of course, we assume that the payment amounts done to the actors and directors, are deducted from the budget.
- Lastly, we also assume that a TV series must have more than one episode, since having only one episode can imply that it is a film (or a short film).
